1 Introduction

There is a theory which states that if ever anyone discovers exactly what the Universe is for and why it is here, it will instantly disappear and be replaced by something even more bizarre and inexplicable. There is another theory which states that this has already happened.

2 Primer special relativity

Definition of line element

$$ds^2 = dx^\mu dx_\nu = \eta_{\mu\nu} dx^\mu dx^\nu \quad (1)$$

$$= dx^T \eta dx \quad (2)$$

Definition of Lorentz transformation

$$dx^\mu = \Lambda^\mu_\nu dx^\nu \quad (3)$$

By postulate the line element ds is invariant under Lorentz transformation

$$ds^2 = \eta_{\mu\nu} dx^\mu dx^\nu \quad (4)$$

$$\stackrel{!}{=} \eta_{\alpha\beta} \Lambda^\alpha_\mu dx^\mu \Lambda^\beta_\nu dx^\nu \rightarrow \eta_{\mu\nu} = \eta_{\alpha\beta} \Lambda^\alpha_\mu \Lambda^\beta_\nu \quad (5)$$

or analog

$$ds^2 = dx^T \eta dx \quad (6)$$

$$\stackrel{!}{=} (\Lambda dx)^T \eta (\Lambda dx) \quad (7)$$

$$= dx^T \Lambda^T \eta \Lambda dx \rightarrow \eta = \Lambda^T \eta \Lambda \quad (8)$$

Observation with the eigentime $d\tau = ds/c$ and 3-velocity $dx^i = v^i dt$

$$\frac{ds^2}{d\tau^2} = c^2 = c^2 \frac{dt^2}{d\tau^2} - \frac{dx^i}{dt} \frac{dx_i}{dt} \left(\frac{dt}{d\tau} \right)^2 \quad (9)$$

$$1 = \frac{dt^2}{d\tau^2} \left(1 - \frac{v^i v_i}{c^2} \right) \rightarrow \frac{dt}{d\tau} \equiv \gamma = \left(\sqrt{1 - \frac{v^2}{c^2}} \right)^{-1} \quad (10)$$

Definition of 4-velocity with 3-velocity $d\vec{x} = \vec{v} dt$

$$u^\mu \equiv \frac{dx^\mu}{d\tau} = \frac{dx^\mu}{dt} \frac{dt}{d\tau} = \rightarrow u^\mu u_\mu = \eta_{\mu\nu} \frac{dx^\mu}{\tau} \frac{dx^\nu}{\tau} = \frac{1}{\tau^2} ds^2 = c^2 \quad (11)$$

$$= (c, \vec{v}) \gamma \quad (12)$$

Object moving in x direction with v meaning $dx = v \cdot dt$ compared to rest frame $dx' = 0$

$$c^2 dt'^2 = ds^2 = c^2 dt^2 - v^2 dt^2 \quad (13)$$

$$= c^2 dt^2 \left(1 - \frac{v^2}{c^2} \right) \quad (14)$$

$$dt' = \frac{ds}{c} \equiv d\tau = dt \sqrt{1 - \frac{v^2}{c^2}} = \frac{dt}{\gamma} \quad (15)$$

Definition 4-momentum

$$p^\mu \equiv m u^\mu = (\gamma m c, \gamma m \vec{v}) \rightarrow p^\mu p_\mu = m^2 u^\mu u_\mu = m^2 c^2 \quad (16)$$

$$\rightarrow (p^0)^2 - p^i p_i = m^2 c^2 \quad (17)$$

$$\rightarrow p^0 = \sqrt{m^2 c^2 + \vec{p}^2} \quad (18)$$

3 Useful formulas

Starting from the Fourier integral theorem we have some freedom to distribute the 2π between back and forth transformation ($a, b \in \mathbb{R}$)

$$F(k) = \sqrt{\frac{|b|}{(2\pi)^{1-a}}} \int_{-\infty}^{\infty} f(x) e^{ibkx} dx \quad \leftrightarrow \quad f(x) = \sqrt{\frac{|b|}{(2\pi)^{1+a}}} \int_{-\infty}^{\infty} F(k) e^{-ibkx} dk \quad (19)$$

$$\int \delta(x) e^{-ikx} dx = 1 \quad (20)$$

$$\int e^{ik(x-y)} dk = 2\pi \delta(x-y) \quad (21)$$

4 Quantum Field Theory

4.1 SREDNICKI - Quantum Field Theory

Problem 6.1 - Path integral in quantum mechanics

5 Quantum Gravity

5.1 AMMON, ERDMENGER - Gauge/Gravity Duality - Foundations and Applications

The authors use $d - 1$ spacial dimension and the sign convention

$$\eta_{\mu\nu} = \text{diag}(-1, 1, \dots, 1) \quad (22)$$

which implies

$$\square = \partial^\mu \partial_\mu = -\partial_t^2 + \Delta \quad (23)$$

$$kx = -k^0 x^0 + \vec{k} \vec{x} \quad (24)$$

and results in a minus sign in the KG equation.

Problem 1.1.1 - Fourier representation of free scalar field

Ansatz (because KG equation looks quite similar to wave equation) $\phi(x) = a \cdot e^{ikx}$ with $x^\mu = (t, \vec{x})$, $k^\mu = (\omega, \vec{k})$ and $a \in \mathbb{C}$ meaning

$$e^{ikx} \equiv e^{ik^\mu x_\mu} = e^{i\eta_{\mu\nu} k^\mu x^\nu} = e^{i(-k^0 x^0 + \vec{k} \vec{x})} \quad (25)$$

Inserting into the equation of motion

$$(\square - m^2)\phi(x) = (\partial^t \partial_t + \Delta - m^2)\phi(x) \quad (26)$$

$$= a(-\partial_t^2 + \Delta - m^2)e^{i(-\omega t + \vec{k} \vec{x})} \quad (27)$$

$$= a\left(\omega^2 + i^2 \vec{k}^2 - m^2\right)e^{i(-\omega t + \vec{k} \vec{x})} = 0 \quad (28)$$

This implies $\omega^2 - \vec{k}^2 - m^2 = 0$ and therefore $\omega_k \equiv \omega = \sqrt{\vec{k}^2 + m^2}$. One particular solution is therefore $\phi(x) = a \cdot e^{ikx}|_{k^0=\omega_k}$. The general solution is then given by a superposition

$$\phi(x) = \int d^{d-1} \vec{k} \left[a(\vec{k}) e^{ikx} \right] \quad (29)$$

to ensure a real valued ϕx we add the conjugate complex solution

$$\phi(x) = \int d^{d-1} \vec{k} \left[a(\vec{k}) e^{ikx} + a^*(\vec{k}) e^{-ikx} \right]. \quad (30)$$

The factor $(2\pi)^{1-d}/2\omega_k$ can be absorbed into $a(k)$.

Problem 1.1.2 - Lagrangian of self-interacting scalar field

The Lagrangian is then

$$\mathcal{L} = \mathcal{L}_{\text{free}} + \mathcal{L}_{\text{int}} \quad (31)$$

$$= -\frac{1}{2} \eta^{\mu\nu} \partial_\mu \phi(x) \partial_\nu \phi(x) - \frac{1}{2} m^2 \phi(x)^2 - \frac{g}{4!} \phi(x)^4. \quad (32)$$

with the Euler-Lagrange equations

$$\partial_\alpha \left(\frac{\partial \mathcal{L}}{\partial(\partial_\alpha \phi)} \right) - \frac{\partial \mathcal{L}}{\partial \phi} = 0. \quad (33)$$

Therefore

$$\partial_\alpha \left(\frac{\partial \mathcal{L}}{\partial(\partial_\alpha \phi)} \right) = \partial_\alpha \left(-\frac{1}{2} \eta^{\mu\nu} [\delta_{\mu\alpha} \partial_\nu \phi + \partial_\mu \phi \delta_{\nu\alpha}] \right) \quad (34)$$

$$= \partial_\alpha \left(-\frac{1}{2} \eta^{\alpha\nu} \partial_\nu \phi - \frac{1}{2} \eta^{\mu\alpha} \partial_\mu \phi \right) \quad (35)$$

$$= -\partial_\alpha (\eta^{\alpha\beta} \partial_\beta \phi) \quad (36)$$

$$= -\partial^\beta \partial_\beta \phi \quad (37)$$

$$= -\square \phi \quad (38)$$

and

$$\frac{\partial \mathcal{L}}{\partial \phi} = -m^2 \phi - \frac{g}{3!} \phi^3. \quad (39)$$

The relevant term in the Euler-Lagrange equations is $\partial \mathcal{L}_{\text{int}} / \partial \phi = -g\phi^3/3!$. The modified equation of motion is therefore

$$(\square - m^2)\phi(x) - \frac{g}{3!}\phi(x)^3 = 0 \quad (40)$$

Problem 1.1.3 - Complex scalar field

$$\mathcal{L}_{\text{free}} = -\partial_\mu \phi^* \partial^\mu \phi - m^2 \phi^* \phi \quad (41)$$

$$= -\eta^{\mu\nu} \partial_\mu \phi^* \partial_\nu \phi - m^2 \phi^* \phi \quad (42)$$

$$= -\frac{1}{2} \eta^{\mu\nu} \partial_\mu (\phi_1 - i\phi_2) \partial_\nu (\phi_1 + i\phi_2) - \frac{1}{2} m^2 (\phi_1^2 + \phi_2^2) \quad (43)$$

$$= -\frac{1}{2} \eta^{\mu\nu} (\partial_\mu \phi_1 \partial_\nu \phi_1 + i\partial_\mu \phi_1 \partial_\nu \phi_2 - i\partial_\mu \phi_2 \partial_\nu \phi_1 + \partial_\mu \phi_2 \partial_\nu \phi_2) - \frac{1}{2} m^2 (\phi_1^2 + \phi_2^2) \quad (44)$$

$$= -\frac{1}{2} \eta^{\mu\nu} (\partial_\mu \phi_1 \partial_\nu \phi_1 + \partial_\mu \phi_2 \partial_\nu \phi_2) - \frac{1}{2} m^2 (\phi_1^2 + \phi_2^2) \quad (45)$$

$$= -\frac{1}{2} \eta^{\mu\nu} \partial_\mu \phi_1 \partial_\nu \phi_1 - \frac{1}{2} m^2 \phi_1^2 - \frac{1}{2} \eta^{\mu\nu} \partial_\mu \phi_2 \partial_\nu \phi_2 - \frac{1}{2} m^2 \phi_2^2 \quad (46)$$

$$= \mathcal{L}_{\text{free1}} + \mathcal{L}_{\text{free2}} \quad (47)$$

Equations of motion for ϕ and ϕ^* are given by

$$\partial_\alpha \left(\frac{\partial \mathcal{L}}{\partial(\partial_\alpha \phi^*)} \right) - \frac{\partial \mathcal{L}}{\partial \phi^*} = 0 \quad (48)$$

$$-\partial_\mu \partial^\mu \phi + m^2 \phi = 0 \quad (49)$$

$$(\square - m^2)\phi = 0 \quad (50)$$

and

$$\partial_\alpha \left(\frac{\partial \mathcal{L}}{\partial(\partial_\alpha \phi)} \right) - \frac{\partial \mathcal{L}}{\partial \phi} = 0 \quad (51)$$

$$-\partial_\mu \partial^\mu \phi + m^2 \phi^* = 0 \quad (52)$$

$$(\square - m^2)\phi^* = 0 \quad (53)$$

Problem 1.2.1 - Time-independence of Noether charge

The conserved current is

$$\partial_\mu \mathcal{J}^\mu \equiv -\partial_0 \mathcal{J}^0 + \partial_i \mathcal{J}^i = 0. \quad (54)$$

Spacial integration using Gauss law on the right hand side gives

$$\int_{\mathbb{R}^{d-1}} d^{d-1} \vec{x} \partial_0 \mathcal{J}^0 = \int_{\mathbb{R}^{d-1}} d^{d-1} \vec{x} \partial_i \mathcal{J}^i \quad (55)$$

$$\partial_0 \int_{\mathbb{R}^{d-1}} d^{d-1} \vec{x} \mathcal{J}^0 = \int_{\partial \mathbb{R}^{d-1}} dS \mathcal{J}^i \quad (56)$$

$$\partial_0 \mathcal{Q} = 0 \quad (57)$$

where we used that \mathcal{J}^i is vanishing at infinity.

Problem 1.2.2 - Hamiltonian of scalar field

The Lagrangian of the real free scalar field is given by

$$\mathcal{L} = -\frac{1}{2} \eta^{\mu\nu} \partial_\mu \phi(x) \partial_\nu \phi(x) - \frac{1}{2} m^2 \phi(x)^2. \quad (58)$$

The canonical momentum is therefore

$$\Pi = \frac{\partial \mathcal{L}}{\partial(\partial_t \phi)} \quad (59)$$

$$= -\frac{1}{2} 2\eta^{ti} \partial_i \phi - \frac{1}{2} 2\eta^{tt} \partial_t \phi \quad (60)$$

$$= \partial_t \phi. \quad (61)$$

Using $\eta_{\mu\nu} = \text{diag}(-1, 1, \dots, 1)$ the Hamiltonian $\mathcal{H} = \Theta^{tt} = \eta^{t\nu} \Theta_\nu^t = -\Theta_t^t$ is

$$\Theta_t^t = -\frac{\partial \mathcal{L}}{\partial(\partial_t \phi)} \partial_t \phi + \mathcal{L} \quad (62)$$

$$= -\Pi \cdot \partial_t \phi + \mathcal{L} \quad (63)$$

and therefore

$$\mathcal{H} = \Pi \partial_t \phi - \mathcal{L} \quad (64)$$

$$= \Pi^2 - \left(-\frac{1}{2} \eta^{\mu\nu} \partial_\mu \phi(x) \partial_\nu \phi(x) - \frac{1}{2} m^2 \phi(x)^2 \right) \quad (65)$$

$$= \Pi^2 - \left(\frac{1}{2} (\partial_t \phi)^2 - \frac{1}{2} (\nabla \phi)^2 - \frac{1}{2} m^2 \phi(x)^2 \right) \quad (66)$$

$$= \frac{1}{2} \Pi^2 + \frac{1}{2} (\nabla \phi)^2 + \frac{1}{2} m^2 \phi(x)^2 \quad (67)$$

Problem 1.2.3 - Symmetric energy-momentum tensor

The Lorentz transformation

$$\Lambda_\nu^\mu = \delta_\nu^\mu + \omega_\nu^\mu \quad (68)$$

implies the field transformation

$$\phi(x^\mu) \rightarrow \tilde{\phi}(x^\mu) = \phi(x^\mu - \omega_\rho^\mu x^\rho) \quad (69)$$

$$= \phi(x^\mu) - \omega_\rho^\mu x^\rho \partial_\mu \phi \quad (70)$$

under which the Lagrangian transforms as

$$\mathcal{L} \rightarrow \tilde{\mathcal{L}} = \mathcal{L} + \frac{\partial \mathcal{L}}{\partial x^\mu} dx^\mu \quad (71)$$

$$= \mathcal{L} - \omega_\rho^\nu x^\rho \partial_\mu (\delta_\nu^\mu \mathcal{L}) \quad (72)$$

$$= \mathcal{L} + \partial_\mu (\omega_\rho^\nu x^\rho) \cdot (\delta_\nu^\mu \mathcal{L}) - \partial_\mu (\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}) \quad (73)$$

$$= \mathcal{L} + \omega_\rho^\nu \delta_\mu^\rho \cdot (\delta_\nu^\mu \mathcal{L}) - \partial_\mu (\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}) \quad (74)$$

$$= \mathcal{L} + \omega_\rho^\rho \mathcal{L} - \partial_\mu (\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}) \quad (75)$$

$$= \mathcal{L} - \partial_\mu (\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}) \quad (76)$$

where we used $\omega_{\mu\nu} = -\omega_{\nu\mu}$ meaning

$$\omega_\rho^\rho = \eta^{\alpha\rho} \omega_{\alpha\rho} \quad (77)$$

$$= \sum_\rho \eta^{0\rho} \omega_{0\rho} + \eta^{1\rho} \omega_{1\rho} + \eta^{2\rho} \omega_{2\rho} + \eta^{3\rho} \omega_{3\rho} \quad (78)$$

$$= 0 \quad (79)$$

in the last step (as η has only diagonal elements and the diagonal elements of ω are zero). With $\delta\phi = -\omega_\rho^\mu x^\rho \partial_\mu \phi$ and $X^\mu = -\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}$ we obtain for the conserved current

$$\mathcal{J}^\mu = -\frac{\partial \mathcal{L}}{\partial (\partial_\mu \phi)} \delta\phi + X^\mu \quad (80)$$

$$= -\frac{\partial \mathcal{L}}{\partial (\partial_\mu \phi)} (-\omega_\rho^\nu x^\rho \partial_\nu \phi) + (-\omega_\rho^\nu x^\rho \delta_\nu^\mu \mathcal{L}) \quad (81)$$

$$= (-\omega_\rho^\nu x^\rho) \left(-\frac{\partial \mathcal{L}}{\partial (\partial_\mu \phi)} \partial_\nu \phi + (\delta_\nu^\mu \mathcal{L}) \right) \quad (82)$$

$$= (-\omega_\rho^\nu x^\rho) \Theta_\nu^\mu \quad (83)$$

$$= (-\eta^{\nu\alpha} \omega_{\alpha\rho} x^\rho) \Theta_\nu^\mu \quad (84)$$

$$= -\omega_{\alpha\rho} x^\rho \Theta^{\mu\alpha} \quad (85)$$

$$= -\frac{1}{2} \omega_{\alpha\rho} (x^\rho \Theta^{\mu\alpha} - x^\alpha \Theta^{\mu\rho}) \quad (86)$$

$$= -\frac{1}{2} \omega_{\alpha\rho} N^{\mu\rho\alpha} \quad (87)$$

With $\partial_\mu \Theta_\nu^\mu = 0$ and $\partial_\mu N^{\mu\nu\rho} = 0$ we see

$$0 = \partial_\mu N^{\mu\nu\rho} \quad (88)$$

$$= \partial_\mu (x^\nu \Theta^{\mu\rho} - x^\rho \Theta^{\mu\nu}) \quad (89)$$

$$= (\partial_\mu x^\nu) \Theta^{\mu\rho} + x^\nu (\partial_\mu \Theta^{\mu\rho}) - (\partial_\mu x^\rho) \Theta^{\mu\nu} - x^\rho (\partial_\mu \Theta^{\mu\nu}) \quad (90)$$

$$= \delta_\mu^\nu \Theta^{\mu\rho} + x^\nu (\partial_\mu \Theta^{\mu\rho}) - \delta_\mu^\rho \Theta^{\mu\nu} - x^\rho (\partial_\mu \Theta^{\mu\nu}) \quad (91)$$

$$= \Theta^{\nu\rho} - \Theta^{\rho\nu}. \quad (92)$$

which means that the (canonical) energy-momentum tensor for Poincare invariant field theories is symmetric $\Theta^{\nu\rho} = \Theta^{\rho\nu}$.

Problem 1.2.4 - Callan-Coleman-Jackiw energy-momentum tensor

For the scalar field we have with $\mathcal{L} = -\frac{1}{2}\eta^{\alpha\beta}\partial_\alpha\phi\partial_\beta\phi - \frac{1}{2}m^2\phi^2$

$$\Theta^\mu_\nu = -\frac{\partial\mathcal{L}}{\partial(\partial_\mu\phi)}\partial_\nu\phi + (\delta^\mu_\nu\mathcal{L}) \quad (93)$$

$$= -\left(-\frac{1}{2}\eta^{\alpha\beta}\delta^\mu_\alpha\partial_\beta\phi - \frac{1}{2}\eta^{\alpha\beta}\partial_\alpha\phi\delta^\mu_\beta\right)\partial_\nu\phi + \delta^\mu_\nu\left(-\frac{1}{2}\eta^{\alpha\beta}\partial_\alpha\phi\partial_\beta\phi - \frac{1}{2}m^2\phi^2\right) \quad (94)$$

$$= \partial^\mu\phi\partial_\nu\phi - \frac{1}{2}\delta^\mu_\nu(\partial^\beta\phi\partial_\beta\phi + m^2\phi^2) \quad (95)$$

which gives in the massless case

$$\Theta^\mu_{\nu, \text{massless}} = \partial^\mu\phi\partial_\nu\phi - \frac{1}{2}\delta^\mu_\nu\partial^\beta\phi\partial_\beta\phi \quad (96)$$

$$\Theta_{\mu\nu, \text{massless}} = \partial_\mu\phi\partial_\nu\phi - \frac{1}{2}\eta_{\mu\nu}\partial^\beta\phi\partial_\beta\phi \quad (97)$$

The new improved or Callan-Coleman-Jackiw energy-momentum tensor for a single, real, massless scalar field in d -dimensional Minkowski space is obtained by adding a term proportional to $(\partial_\mu\partial_\nu - \eta_{\mu\nu}\Box)\phi^2$ where the proportionality constant is chosen to make the tensor traceless

$$T_{\mu\nu} = \partial_\mu\phi\partial_\nu\phi - \frac{1}{2}\eta_{\mu\nu}\partial_\rho\phi\partial^\rho\phi - \frac{d-2}{4(d-1)}(\partial_\mu\partial_\nu - \eta_{\mu\nu}\Box)\phi^2 \quad (98)$$

Let us now check the properties

1. symmetric: obvious
2. conserved: we use the equation of motion $\partial^\mu\partial_\mu\phi = \Box\phi = 0$

$$\partial_\mu T^{\mu\nu} = (\partial_\mu\partial^\mu\phi)\partial^\nu\phi + \partial^\mu\phi(\partial_\mu\partial^\nu\phi) \quad (99)$$

$$- \frac{1}{2}\eta^{\mu\nu}[(\partial_\mu\partial_\rho\phi)\partial^\rho\phi + \partial_\rho\phi(\partial_\mu\partial^\rho\phi)] \quad (100)$$

$$- \frac{d-2}{4(d-1)}\Box\partial^\nu\phi^2 + \frac{d-2}{4(d-1)}\eta^{\mu\nu}\partial_\mu\Box\phi^2 \quad (101)$$

$$= \partial^\mu\phi(\partial_\mu\partial^\nu\phi) - \frac{1}{2}[(\partial^\nu\partial_\rho\phi)\partial^\rho\phi + \partial_\rho\phi(\partial^\nu\partial^\rho\phi)] \quad (102)$$

$$= 0 \quad (103)$$

3. traceless:

$$T^\mu_\mu = \partial^\mu\phi\partial_\mu\phi - \frac{1}{2}\eta^\mu_\mu\partial_\rho\phi\partial^\rho\phi - \frac{d-2}{4(d-1)}(\partial^\mu\partial_\mu - \eta^\mu_\mu\Box)\phi^2 \quad (104)$$

$$= \partial^\mu\phi\partial_\mu\phi - \frac{d}{2}\partial_\rho\phi\partial^\rho\phi - \frac{d-2}{4(d-1)}(\partial^\mu\partial_\mu - d\cdot\partial^\mu\partial_\mu)\phi^2 \quad (105)$$

$$= \frac{2-d}{2}\partial_\rho\phi\partial^\rho\phi - \frac{d-2}{4(d-1)}(1-d)\partial^\mu\partial_\mu\phi^2 \quad (106)$$

$$= \frac{2-d}{2}\partial_\rho\phi\partial^\rho\phi + \frac{d-2}{4}\partial^\mu\partial_\mu\phi^2 \quad (107)$$

$$= \frac{2-d}{2}\partial_\rho\phi\partial^\rho\phi + \frac{d-2}{4}\partial^\mu(2\phi\partial_\mu\phi) \quad (108)$$

$$= \frac{2-d}{2}[\partial_\rho\phi\partial^\rho\phi - \partial^\mu\phi\partial_\mu\phi] + \frac{d-2}{2}\phi\cdot\Box\phi \quad (109)$$

$$= 0. \quad (110)$$

Problem 1.2.5 - Noether currents of complex scalar field

$$\mathcal{L}_{\text{free}} = -\partial^\mu \phi^* \partial_\mu \phi - m^2 \phi^* \phi \quad (111)$$

$$= -\eta^{\mu\nu} \partial_\nu \phi^* \partial_\mu \phi - m^2 \phi^* \phi \quad (112)$$

with the field transformations

$$\phi \rightarrow \phi' = e^{i\alpha} \phi = \phi + i\alpha \phi \quad (113)$$

$$\phi^* \rightarrow \phi'^* = e^{-i\alpha} \phi^* = \phi^* - i\alpha \phi^* \quad (114)$$

$$\mathcal{L} \rightarrow \mathcal{L}' = \mathcal{L} \quad (115)$$

we have $\delta\phi = i\alpha\phi$ and $\delta\phi^* = -i\alpha\phi^*$ and $X^\mu = 0$. With

$$\mathcal{J}^\sigma = -\frac{\partial \mathcal{L}}{\partial(\partial_\sigma \phi)} \delta\phi + X^\sigma \quad (116)$$

we obtain the two fields

$$\mathcal{J}^\sigma = -\frac{\partial \mathcal{L}}{\partial(\partial_\sigma \phi)} \delta\phi - \frac{\partial \mathcal{L}}{\partial(\partial_\sigma \phi^*)} \delta\phi^* \quad (117)$$

$$= -(\eta^{\sigma\nu} \partial_\nu \phi^*) i\alpha\phi + (\eta^{\sigma\nu} \partial_\nu \phi) i\alpha\phi^* \quad (118)$$

$$= i\alpha [\phi^* (\partial^\sigma \phi) - \phi (\partial^\sigma \phi^*)] \quad (119)$$

Problem 1.2.6 - $O(n)$ invariance of action of n free scalar fields

For the n real scalar fields with equal mass m we have

$$\mathcal{L} = -\frac{1}{2} \sum_{j=1}^n [\eta^{\alpha\beta} (\partial_\alpha \phi_j) (\partial_\beta \phi_j) + m^2 (\phi_j)^2] \quad (120)$$

the action functional is then

$$S = \int d^d x \mathcal{L} \quad (121)$$

$$= -\frac{1}{2} \sum_{j=1}^n \int d^d x [\eta^{\alpha\beta} (\partial_\alpha \phi_j) (\partial_\beta \phi_j) + m^2 (\phi_j \phi_j)] \quad (122)$$

With $\phi'^j = R^j_k \phi^k$ and the definition of an orthogonal matrix R (inner product is invariant under rotation)

$$x^i x_i = x^i \delta_{ij} x^j \quad (123)$$

$$\stackrel{!}{=} R^i_a x^a \delta_{ij} R^j_b x^b \quad (124)$$

$$= \delta_{ij} R^j_b R^i_a x^a x^b \quad (125)$$

$$= R_{ib} R^i_a x^a x^b \quad (126)$$

we require $R_{ib}R_a^i = \delta_{ba}$. Then we can recalculate the action

$$S' = -\frac{1}{2} \sum_{j=1}^n \int d^d x \left[\eta^{\alpha\beta} (\partial_\alpha R_{ja} \phi^a) (\partial_\beta R_b^j \phi^b) + m^2 (R_{ja} \phi^a \cdot R_b^j \phi^b) \right] \quad (127)$$

$$= -\frac{1}{2} \sum_{j=1}^n \int d^d x \left[\eta^{\alpha\beta} R_{ja} R_b^j (\partial_\alpha \phi^a) (\partial_\beta \phi^b) + m^2 R_{ja} R_b^j (\phi^a \cdot \phi^b) \right] \quad (128)$$

$$= -\frac{1}{2} \sum_{b=1}^n \int d^d x \left[\eta^{\alpha\beta} \delta_{ab} (\partial_\alpha \phi^a) (\partial_\beta \phi^b) + m^2 \delta_{ab} (\phi^a \cdot \phi^b) \right] \quad (129)$$

$$= -\frac{1}{2} \sum_{b=1}^n \int d^d x \left[\eta^{\alpha\beta} (\partial_\alpha \phi_b) (\partial_\beta \phi^b) + m^2 (\phi_b \cdot \phi^b) \right] \quad (130)$$

Analog for the complex case.

Problem 1.3.1 - Field commutators of scalar field

From the field

$$\hat{\phi}(x) = \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1} \vec{k}}{2\omega_k} \left[\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx} \right]_{k^0=\omega_k} \quad (131)$$

we can derive the conjugated momentum

$$\hat{\Pi}(x) = \partial_t \hat{\phi} \quad (132)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1} \vec{k}}{2\omega_k} \partial_t \left[\hat{a}(\vec{k}) e^{-i\omega_k t} e^{i\vec{k}\vec{x}} + \hat{a}^\dagger(\vec{k}) e^{i\omega_k t} e^{-i\vec{k}\vec{x}} \right] \quad (133)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1} \vec{k}}{2\omega_k} \left[\hat{a}(\vec{k}) (-i\omega_k) e^{ikx} + \hat{a}^\dagger(\vec{k}) (i\omega_k) e^{-ikx} \right]_{k^0=\omega_k} \quad (134)$$

$$= \frac{i}{2(2\pi)^{d-1}} \int d^{d-1} \vec{k} \left[-\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx} \right]_{k^0=\omega_k}. \quad (135)$$

Now calculating the three commutation relations

$$\bullet [\hat{\phi}(t, \vec{x}), \hat{\phi}(t, \vec{y})]$$

$$= \frac{1}{(2\pi)^{2(d-1)}} \int \frac{d^{d-1} \vec{k} d^{d-1} \vec{q}}{4\omega_k \omega_q} \left((\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx}) (\hat{a}(\vec{q}) e^{iqy} + \hat{a}^\dagger(\vec{q}) e^{-iqy}) - \right. \quad (136)$$

$$\left. (\hat{a}(\vec{q}) e^{iqy} + \hat{a}^\dagger(\vec{q}) e^{-iqy}) (\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx}) \right) \quad (137)$$

the bracket can then be simplified

$$(\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx}) (\hat{a}(\vec{q}) e^{iqy} + \hat{a}^\dagger(\vec{q}) e^{-iqy}) - (\hat{a}(\vec{q}) e^{iqy} + \hat{a}^\dagger(\vec{q}) e^{-iqy}) (\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx}) \quad (138)$$

$$= [\hat{a}(\vec{k}), \hat{a}(\vec{q})] e^{i(kx+qy)} + [\hat{a}(\vec{k}), \hat{a}^\dagger(\vec{q})] e^{i(kx-xy)} + [\hat{a}^\dagger(\vec{k}), \hat{a}(\vec{q})] e^{i(-kx+qy)} + [\hat{a}^\dagger(\vec{k}), \hat{a}^\dagger(\vec{q})] e^{i(-kx-xy)} \quad (139)$$

$$= [\hat{a}(\vec{k}), \hat{a}^\dagger(\vec{q})] e^{i(kx-xy)} - [\hat{a}(\vec{q}), \hat{a}^\dagger(\vec{k})] e^{i(-kx+qy)} \quad (140)$$

$$= 2\omega_k (2\pi)^{d-1} \left(\delta^{d-1}(\vec{k} - \vec{q}) e^{i(kx-xy)} - \delta^{d-1}(\vec{q} - \vec{k}) e^{i(-kx+qy)} \right) \quad (141)$$

where we used the given commutation relations for $\hat{a}(\vec{k})$.

$$[\hat{\phi}(t, \vec{x}), \hat{\phi}(t, \vec{y})] = \frac{1}{(2\pi)^{2(d-1)}} \int \frac{d^{d-1}\vec{k} d^{d-1}\vec{q}}{4\omega_k \omega_q} 2\omega_k (2\pi)^{d-1} \left(\delta^{d-1}(\vec{k} - \vec{q}) e^{i(kx - qy)} - \delta^{d-1}(\vec{q} - \vec{k}) e^{i(-kx + qy)} \right) \quad (142)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1}\vec{k} d^{d-1}\vec{q}}{2\omega_q} \left(\delta^{d-1}(\vec{k} - \vec{q}) e^{i(kx - qy)} - \delta^{d-1}(\vec{q} - \vec{k}) e^{i(-kx + qy)} \right) \quad (143)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1}\vec{k} d^{d-1}\vec{q}}{2\omega_q} \left(\delta^{d-1}(\vec{k} - \vec{q}) e^{i(-\omega_k t + \vec{k}\vec{x} - [-\omega_q t + \vec{q}\vec{y}])} \right. \quad (144)$$

$$\left. - \delta^{d-1}(\vec{q} - \vec{k}) e^{-i(-\omega_k t + \vec{k}\vec{x} - [-\omega_q t + \vec{q}\vec{y}])} \right) \quad (145)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1}\vec{k} d^{d-1}\vec{q}}{2\omega_q} \left(\delta^{d-1}(\vec{k} - \vec{q}) e^{i(-[\omega_k - \omega_q]t + \vec{k}\vec{x} - \vec{q}\vec{y})} \right. \quad (146)$$

$$\left. - \delta^{d-1}(\vec{q} - \vec{k}) e^{-i(-[\omega_k - \omega_q]t + \vec{k}\vec{x} - \vec{q}\vec{y})} \right) \quad (147)$$

$$= \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1}\vec{k}}{2\omega_k} \left(e^{i\vec{k}(\vec{x} - \vec{y})} - e^{-i\vec{k}(\vec{x} - \vec{y})} \right) \quad (148)$$

$$= \frac{1}{2\omega_k} (\delta^{d-1}(\vec{y} - \vec{x}) - \delta^{d-1}(\vec{x} - \vec{y})) \quad (149)$$

$$= 0 \quad (150)$$

where we used $\delta(x) = \int dk e^{-2\pi i k x}$ or $\delta^d(x) = \int \frac{d^d k}{(2\pi)^d} e^{-i k x}$.

- $[\hat{\Pi}(t, \vec{x}), \hat{\Pi}(t, \vec{y})]$ **Not done yet**
- $[\hat{\phi}(t, \vec{x}), \hat{\Pi}(t, \vec{y})]$ **Not done yet**

Problem 1.3.2 - Lorentz invariant integration measure

We use the property of the δ -function $\delta(f(x)) = \sum_i \frac{\delta(x - a_i)}{|f'(a_i)|}$ where a_i are the zeros of $f(x)$ and $\omega_k = \sqrt{\vec{k}^2 + m^2}$. With $\int d^d k$ being manifestly Lorentz invariant

$$dk'^\mu = \Lambda_\nu^\mu dk^\nu \quad \rightarrow \quad \frac{dk'^\mu}{dk^\nu} = \Lambda_\nu^\mu \quad \rightarrow \quad \int d^d k' = |\det(\Lambda_\nu^\mu)| \int d^d k = \int d^d k \quad (151)$$

$\delta^d[k^2 + m^2]$ being invariant and with $k^0 = \sqrt{\vec{k}^2 + m^2}$ we see that k is inside the forward light cone and remains there under orthochrone transformation ($\Theta(k^0)$ is invariant for relevant k) we are convinced that the starting expression is Lorentz invariant (integration over the upper mass

shell)

$$\int d^d \vec{k} \delta^d[k^2 + m^2] \Theta(k^0) = \int d^{d-1} \vec{k} \int dk^0 \delta^d[k^2 + m^2] \Theta(k^0) \quad (152)$$

$$= \int d^{d-1} \vec{k} \int dk^0 \delta^d[-(k^0)^2 + \vec{k}^2 + m^2] \Theta(k^0) \quad (153)$$

$$= \int d^{d-1} \vec{k} \int dk^0 \delta^d[\omega_k^2 - (k^0)^2] \Theta(k^0) \quad (154)$$

$$= \int d^{d-1} \vec{k} \int dk^0 \left(\frac{\delta(k^0 - \omega_k)}{2\omega_k} + \frac{\delta(k^0 + \omega_k)}{2\omega_k} \right) \Theta(k^0) \quad (155)$$

$$= \int \frac{d^{d-1} \vec{k}}{2\omega_k} \int dk^0 \delta(k^0 - \omega_k) \quad (156)$$

$$= \int \frac{d^{d-1} \vec{k}}{2\omega_k}. \quad (157)$$

As we started with a Lorentz invariant expression the derived measure is also invariant.

Problem 1.3.3 - Retarded Green function

$$\Delta_F = \int \frac{d^d k}{(2\pi)^d} \frac{e^{ik(x-y)}}{k^2 + m^2 - i\epsilon} \quad (158)$$

$$G_R = \int \frac{d^d k}{(2\pi)^d} \frac{e^{ik(x-y)}}{-(k^0 + i\epsilon)^2 + \vec{k}^2 + m^2} \quad (159)$$

For the poles of G_R we have

$$-(k^0 + i\epsilon)^2 + \vec{k}^2 + m^2 = 0 \quad (160)$$

$$k^0 = -i\epsilon \pm \sqrt{\vec{k}^2 + m^2} \quad (161)$$

$$= -i\epsilon \pm \omega_k \quad (162)$$

while we the poles of Δ_F are given by

$$-(k^0)^2 + \vec{k}^2 + m^2 - i\epsilon = 0 \quad (163)$$

$$k^0 = \pm \sqrt{\vec{k}^2 + m^2 - i\epsilon} \quad (164)$$

$$= \pm \sqrt{\omega_k^2 - i\epsilon} \quad (165)$$

Figure 2: Poles of G_R (circle) and Δ_F (triangle)

With $|\vec{k}\rangle = a^\dagger(\vec{k})|0\rangle$ and

$$\hat{\phi}(x) = \frac{1}{(2\pi)^{d-1}} \int \frac{d^{d-1} \vec{k}}{2\omega_k} \left[\hat{a}(\vec{k}) e^{ikx} + \hat{a}^\dagger(\vec{k}) e^{-ikx} \right]_{k^0 = \omega_k} \quad (166)$$

we obtain

$$\hat{\phi}(x)\hat{\phi}(y) \sim \left(\hat{a}(\vec{k})e^{ikx} + \hat{a}^\dagger(\vec{k})e^{-ikx}\right) \left(\hat{a}(\vec{q})e^{iqy} + \hat{a}^\dagger(\vec{q})e^{-iqy}\right) \quad (167)$$

$$= \hat{a}(\vec{k})\hat{a}(\vec{q})e^{i(kx+qy)} + \hat{a}(\vec{k})\hat{a}^\dagger(\vec{q})e^{-i(-kx+qy)} + \hat{a}^\dagger(\vec{k})\hat{a}(\vec{q})e^{i(-kx+qy)} + \hat{a}^\dagger(\vec{k})\hat{a}^\dagger(\vec{q})e^{-i(kx+qy)} \quad (168)$$

$$= \hat{a}(\vec{k})\hat{a}(\vec{q})e^{i(kx+qy)} + \hat{a}(\vec{k})\hat{a}^\dagger(\vec{q})e^{-i(-kx+qy)} + \hat{a}^\dagger(\vec{k})\hat{a}^\dagger(\vec{q})e^{-i(kx+qy)} \quad (169)$$

$$+ \left(\hat{a}(\vec{q})\hat{a}^\dagger(\vec{k}) - 2\omega_k(2\pi)^{d-1}\delta^{d-1}(\vec{q} - \vec{k})\right) e^{i(-kx+qy)} \quad (170)$$

and therefore

$$\langle 0|\hat{\phi}(x)\hat{\phi}(y)|0\rangle = \frac{1}{(2\pi)^{2(d-1)}} \int \frac{d^{d-1}\vec{k}}{2\omega_k} \frac{d^{d-1}\vec{q}}{2\omega_q} \langle 0|\hat{a}(\vec{k})\hat{a}(\vec{q})|0\rangle e^{i(kx+qy)} + \langle 0|\hat{a}(\vec{k})\hat{a}^\dagger(\vec{q})|0\rangle e^{-i(-kx+qy)} \quad (171)$$

$$+ \langle 0|\hat{a}^\dagger(\vec{k})\hat{a}^\dagger(\vec{q})|0\rangle e^{-i(kx+qy)} + \left(\langle 0|\hat{a}(\vec{q})\hat{a}^\dagger(\vec{k})|0\rangle - 2\omega_k(2\pi)^{d-1}\delta^{d-1}(\vec{q} - \vec{k})\right) e^{i(-kx+qy)} \quad (172)$$

$$= \frac{1}{(2\pi)^{2(d-1)}} \int \frac{d^{d-1}\vec{k}}{2\omega_k} \frac{d^{d-1}\vec{q}}{2\omega_q} \langle \vec{k}|\vec{q}\rangle e^{-i(-kx+qy)} + \left(\langle \vec{q}|\vec{k}\rangle - 2\omega_k(2\pi)^{d-1}\delta^{d-1}(\vec{q} - \vec{k})\right) e^{i(-kx+qy)} \quad (173)$$

7 Astrophysics

7.1 CARROLL, OSTLIE - An Introduction to Modern Astrophysics

7.2 WEINBERG - Lecture on Astrophysics

Problem 1 - Hydrostatics of spherical star

Gravitational force on a mass element must be balanced by the top and bottom pressure (buoyancy)

$$F_p^{\text{top}} - F_p^{\text{bottom}} = F_g \quad (180)$$

$$dA \cdot p \left(r + \frac{dr}{2} \right) - dA \cdot p \left(r - \frac{dr}{2} \right) = -g(r) \rho(r) \cdot dA \cdot dr \quad (181)$$

$$\frac{dp}{dr} = -g(r) \rho(r) \quad (182)$$

$$= -G \frac{\mathcal{M}(r)}{r^2} \rho(r) \quad (183)$$

and therefore

$$\rho(r) \mathcal{M}(r) = - \frac{dp}{dr} \frac{r^2}{G} \quad (184)$$

where

$$g(r) = G \frac{\mathcal{M}(r)}{r^2} = \frac{G}{r^2} \int_0^r 4\pi \rho(r') r'^2 dr'. \quad (185)$$

The gravitational binding energy Ω is given by

$$d\Omega = -G \frac{m_{\text{shell}} \mathcal{M}}{r} \quad (186)$$

$$\Omega = -G \int_0^R \frac{4\pi \rho(r) \mathcal{M}(r)}{r} r^2 dr \quad (187)$$

$$= -4\pi G \int_0^R r \rho(r) \mathcal{M}(r) dr \quad (188)$$

$$= 4\pi \int_0^R \frac{dp}{dr} r^3 dr \quad (189)$$

$$= 4\pi p r^3 \Big|_0^R - 3 \cdot 4\pi \int_0^R p(r) r^2 dr \quad (190)$$

$$= 4\pi p_0 R^3 - 3 \left(4\pi \int_0^R p(r) r^2 dr \right) \quad (191)$$

$$= 4\pi p_0 R^3 - 3 \int_{K_R} p(\vec{r}) d^3 r. \quad (192)$$

Problem 2 - CNO cycle

$$\Gamma(ii) = \Gamma(iii) = \Gamma(iv) = \Gamma(v) = \Gamma(i) \quad (193)$$

$$\Gamma(vi) = P \cdot \Gamma(i) \quad (194)$$

$$\Gamma(vii) = \Gamma(viii) = \Gamma(ix) = \Gamma(x) = (1 - P) \cdot \Gamma(i) \quad (195)$$

Check result!

Problem 3

Not done yet

Problem 4

Not done yet

Problem 5 - Radial density expansion for a polytrope

For the polytrope equation

$$p = K \rho^\Gamma \quad (196)$$

we obtain

$$\frac{dp}{d\rho} = K \Gamma \rho^{\Gamma-1} \quad (197)$$

$$= \Gamma \frac{p}{\rho} \quad (198)$$

With equations (1.1.4/5)

$$\frac{dp}{dr} = -\frac{G \mathcal{M}(r) \rho(r)}{r^2} \rightarrow \mathcal{M}(r) = -\frac{p' r^2}{G \rho} \quad (199)$$

$$\frac{d\mathcal{M}(r)}{dr} = 4\pi r^2 \rho(r) \quad (200)$$

we can obtain a second order ODE by differentiating the first one and substituting \mathcal{M}'

$$\mathcal{M}' = -\frac{1}{G} \frac{d}{dr} \left(\frac{r^2}{\rho} \frac{d}{dr} p \right) \quad (201)$$

$$\frac{d}{dr} \left(\frac{r^2}{\rho} \frac{d}{dr} p \right) + G\mathcal{M}' = 0 \quad (202)$$

$$\frac{d}{dr} \left(\frac{r^2}{\rho} \frac{d}{dr} p \right) + 4\pi G r^2 \rho = 0 \quad (203)$$

now we can substitute the $p = K\rho^\Gamma$ and obtain

$$\frac{d}{dr} \left(\frac{r^2}{\rho} \frac{d}{dr} \rho^\Gamma \right) + \frac{4\pi G}{K} r^2 \rho = 0. \quad (204)$$

The Taylor expansion

$$\rho(r) = \rho(0) [1 + ar^2 + br^4 + \dots] \quad (205)$$

$$\rho(r)^\Gamma = \rho(0)^\Gamma [1 + ar^2 + br^4 + \dots]^\Gamma \quad (206)$$

$$= \rho(0)^\Gamma \left[1 + a\Gamma r^2 + \left(b\Gamma + \frac{1}{2}a^2\Gamma(\Gamma-1) \right) r^4 + \dots \right] \quad (207)$$

$$\frac{1}{\rho} = \frac{1}{\rho(0)} [1 - ar^2 + (a^2 - b)r^4 + \dots] \quad (208)$$

can be substituted into the ODE

$$\rho(0)^{\Gamma-1} \frac{d}{dr} \left(r^2 [1 - ar^2 + (a^2 - b)r^4 + \dots] \left[a\Gamma 2r + \left(b\Gamma + \frac{1}{2}a^2\Gamma(\Gamma-1) \right) 4r^3 + \dots \right] \right) \quad (209)$$

$$+ \frac{4\pi G}{K} \rho(0) [r^2 + ar^4 + br^6 + \dots] = 0. \quad (210)$$

and sort by powers of r

$$\rho(0)^{\Gamma-1} \frac{d}{dr} \left(2\Gamma ar^3 + \left[-2\Gamma a^2 + 4 \left(b\Gamma + \frac{1}{2}a^2\Gamma(\Gamma-1) \right) \right] r^5 + \dots \right) + \frac{4\pi G}{K} \rho(0) [r^2 + ar^4 + br^6 + \dots] = 0. \quad (211)$$

In second order of r we obtain

$$\rho(0)^{\Gamma-1} 2\Gamma a 3 + \frac{4\pi G}{K} \rho(0) = 0 \quad (212)$$

which results in

$$a = -\frac{2\pi G}{3\Gamma K \rho(0)^{\Gamma-2}} \quad (213)$$

Problem 11

The modified Poisson equation is given by

$$(\Delta + \mathcal{R}^{-2}) \phi = 4\pi G\rho \quad (214)$$

with the Greens function

$$(\Delta + \mathcal{R}^{-2}) G(\vec{r}) = -\delta^3(\vec{r}). \quad (215)$$

The Fourier transform of the Greens function

$$G(\vec{k}) = \int d^3\vec{r} G(\vec{r}) e^{-i\vec{k}\vec{r}} \quad (216)$$

and the field equations are given by

$$[k^2 + \mathcal{R}^{-2}] G(\vec{k}) = -1 \quad (217)$$

$$G(\vec{k}) = \frac{1}{k^2 + \mathcal{R}^{-2}} \quad (218)$$

$$G(\vec{x}) = \frac{1}{(2\pi)^3} \int d^3\vec{k} \frac{e^{i\vec{k}\vec{r}}}{k^2 + \mathcal{R}^{-2}} \quad (219)$$

$$= \frac{1}{(2\pi)^3} 2\pi \int_0^\infty \int_0^\pi \frac{e^{ik_r r \cos \theta}}{k_r^2 + \mathcal{R}^{-2}} k_r^2 \sin \theta d\theta dk_r \quad (220)$$

$$= \frac{1}{(2\pi)^3} 2\pi \int_0^\infty \left[-\frac{e^{ik_r r \cos \theta}}{ik_r r} \right]_0^\pi \frac{1}{k_r^2 + \mathcal{R}^{-2}} k_r^2 dk_r \quad (221)$$

$$= \frac{1}{2\pi^2 r} \int_0^\infty \frac{k_r \sin(k_r r)}{k_r^2 + \mathcal{R}^{-2}} dk_r \quad (222)$$

$$(223)$$

The integral can be can be calculated using the residual theorem

$$\int_0^\infty \frac{k_r \sin(k_r r)}{k_r^2 + \mathcal{R}^{-2}} dk_r = \frac{1}{2} \int_{-\infty}^\infty \frac{k_r \sin(k_r r)}{k_r^2 + \mathcal{R}^{-2}} dk_r \quad (224)$$

$$= \frac{1}{2} \int_{-\infty}^\infty \frac{k_r \sin(k_r r)}{(k_r + i\mathcal{R}^{-1})(k_r - i\mathcal{R}^{-1})} dk_r \quad (225)$$

$$= \frac{1}{2} \int_{-\infty}^\infty \frac{k_r \sin(k_r r)}{2k_r} \left(\frac{1}{k_r + i\mathcal{R}^{-1}} + \frac{1}{k_r - i\mathcal{R}^{-1}} \right) dk_r \quad (226)$$

$$= \frac{1}{4} \int_{-\infty}^\infty \frac{\sin(k_r r)}{k_r + i\mathcal{R}^{-1}} dk_r + \frac{1}{4} \int_{-\infty}^\infty \frac{\sin(k_r r)}{k_r - i\mathcal{R}^{-1}} dk_r \quad (227)$$
